

# Lemo

Lemo has two different kind of angle plugs available: one with fixed cable outlet and one with configurable outlet.

The standard angle plug has a fixed direction, the outlet is always at position #5, which is 180° opposite the red dot.

The *Anglissimo* angle plug allows to choose the cable outlet in 8 different directions in 45° steps. All connectors at our cables are secured with glue to prevent accidentally opening. This is also the case with this plug, so unfortunately a subsequent change of direction by the customer is not easily possible.
